CHEM 1330: CULINARY CHEMISTRY - Mr. Lewis

Syllabus Spring 2024

University of Texas at Tyler

Online: Asynchronous (July 8 - August 9)

Instructor Contact	Office	Drop By Hours	Email	Phone
Mr. Jerome Lewis	RBS 3013	By email	jeromelewis@uttyler.edu	566- 7206

Welcome to Culinary Chemistry

Course Description

This course will introduce and provide you with an understanding of the underlying principles of chemistry including the composition, structure, properties, and reactivity of matter. This course will describe the chemistry and chemical reaction surrounding food and cooking. While it blends fundamental chemistry with the more applied aspects of food chemistry, the understanding of the chemical concepts associated with food and food preparation will be the main focus. Topics include predicting and explaining the chemical components of food and their interactions, classifying the different components of food. All of the course content will be presented using online lectures, quizzes and other online practice tools that will be available through the Canvas course. Students in this course are responsible for all of the content and material included in and required by this course.

Important Dates

The semester begins July 8th and ends August 9th. This course meets asynchronously online, but assignments are due on a week-to-week basis unless specified by the instructor.

July 8th - August 9th.

- Census date last day to file for grade replacement: July 11th
- •
- Last day to drop or withdraw from courses with a W: July 30th
- August 7th Final Project (Each student's final video for the project will be due 11:59 pm on Wed, August 7th.)

MARK YOUR CALENDAR!

Student Learning Outcomes

Throughout the semester you will be required to demonstrate a working knowledge of culinary chemistry using Critical Thinking skills (CT), and Empirical and Quantitative skills (EQs). By the end of the course, successful students should be able to:

1. Demonstrate critical thinking and reasoning skills by predicting and explaining the chemical components of food and their interactions using the scientific method (CTS, EQS),

2. Explore and clarify the reasons behind why certain ingredients and reagents are used in particular foods and culinary reactions (EQs),

3. Classify the different components of food (e.g. proteins, carbohydrates, fats & oils, gels, colloids) and the importance of their chemical properties and behavior (EQS),

4. Demonstrate the ability to work in a group with others and communicate effectively (COM, TW)

Additional Learning Outcomes

- 1) Define the different classes of macromolecules that make up food.
- 2) Able to understand what an atom is and how it makes up matter.
- 3) Classifying solutions, colloids, and suspensions.
- 4) Applying chemical reactions to determine flavor profiles.
- 5) Using and explaining how scientific method is incorporated in cooking.

<u>Required Materials</u>

Video lectures/ Lab Repository:

This course utilizes videos created by a former instructor (Dr. Jordan Beaver) made accessible through LearnWorlds. The entire video library is made available for \$25 for the semester at https://culinary-chemistry.getlearnworlds.com/course/culchem

Textbook:

Textbooks for this class are FREE. They will be provided in the course. Primary Text: The Science of Cooking by Joseph Provost, et. al Secondary Text: On Food and Cooking by Harold McGee

Kitchen & Ingredients:

Access to a kitchen is required to take this course. You will need an available oven, stove top, and basic kitchen accessories. You will also be required to purchase certain food items from a list provided by the instructor. There will be a Budget Options to help with costs. Ingredients are considered part of your textbook fees. If you are ever in a position that you cannot afford specific ingredients or equipment, please contact the instructor with an adequate explanation and proposed alternative. And if you need help, please ask!

Technology

Computer access with reliable high-speed internet connection is required. A mobile device or tablet may not be sufficient. If you chose to use one of those devices as your primary method for accessing the course page, do not be surprised if you have a lot of trouble. **However, extensions or exceptions will not be made due to unpreparednes**s. Video recording capability is also necessary and basic editing skills are highly recommended.

Calculator Periodic Table: access on Canvas, digitally or printed

Video Editing & Submitting Cooking lab Recordings

Though not covered within the course, some basic competency with video editing will likely be needed for your sanity and the graders for the course. Typically, Cooking Lab videos should be kept to less than 3 minutes long. Thus, it is recommended that students familiarize themselves with making "quick cut" videos of the cooking procedure. See the video below or do some searching for user-friendly editing software.

- iPhone: (257) How to Trim Clips in iMovie FAST & EASY YouTube
- VN Editor: https://www.youtube.com/watch?y=yb7-ab-6M08

To receive a passing grade for the course, you must complete the Final Project; otherwise, you will fail the course regardless of your other exam and assignment scores

Final Project Due Date: Wednesday, August 7th at 11:59 pm.

The last day to withdraw from the course with a "W" is Monday, March 25. IT is your responsibility to withdraw from the course..

Issues Uploading videos to Canvas

Due to large class size of CHEM 1330, the canvas page can sometimes get overwhelmed with the amount of data that gets uploaded. Students have experienced issues when attempting to submit cooking labs (especially if their file size is particularly large of if they are one of the last ones to upload).

In this case it is recommended to compress the file or upload the video to the "Comments" section of the assignment. Another great alternative is uploading to Youtube and submitting the URL to the assignment.

Tiktok is great as a video editor; however, due to Texas regulations, YOU MAY NOT SUBMIT A URL THAT LINKS TO TIKTOK. The instructor cannot access any recording that are directly uploaded to Tiktok.

Online Content/Modules

This course uses module-based learning. There are 12 modules that need to be completed throughout the semester. I will primarily communicate with you through Canvas. I will post:

- **Supplemental Lecture Videos** •
- Checking for understanding • quizzes, A learning activity
- A video lab prompt, Module assignment
- Due dates for all assignments
- Links to toolkit tutorial videos for selected topics

There is a checklist at the end of the syllabus that should be used to confirm completion of all required materials. If you have any technical, connection, or any other issues with Canvas,

contact Canvas 24/7 Support.

Please make sure you are set to receive notifications to your email and/or your phone/tablet/etc. from Canvas at least daily.

L

<u>Quizzes / Learning Activities (20% of Total Grade)</u>

<u>Quizzes</u> will assess your understanding of the lecture material and/or readings. Most of the quizzes will be 5-10 questions and can be retaken until content mastery. Completion of the Syllabus Quiz and Introduction Quiz will be your first two quiz grades. You will want to make sure you are on Canvas daily to check for due dates because once a quiz closes you will be unable to take that quiz. These quizzes are designed to review the big topics from each chapter and to help you learn the material. There will be concepts that are pulled from previous chapters, so DO NOT brain dump.

<u>Learning Activities</u> will reinforce module content and may include: identifying structures and components of food, sorting topics, matching, etc. These can also be redone until content mastery.

Quizzes & Learning Activities account for 20% of the course.

Don't put off the quizzes and/or learning activities until the due date. Make sure that you are working on them as we go through the chapter. These assignments are meant to help you learn the material.

The highest grade for the quiz will be kept. One quiz and one learning activity will be dropped.

Make sure you are paying attention to due dates on Canvas. Do not want an assignment to sneak up on you.

hollup...Let him cook

Cooking Labs (20% of Total Grade)

Most weeks, students will be assigned an at-home cooking project, **where they will post a video of the food they have created and complete Cookbook Pages**.. Each module will list specific requirements for that particular module (typically the content to be discussed by the student and a supporting video).

You do not need to be an expert on video editing, but you must keep the finished video to under 3 minutes (unless specified otherwise)..Videos for Cooking Labs will have to be uploaded to Canvas by 11:59 pm. At least one week's notice will be given prior to the due date changing for the cooking lab. Will never be moved up, only back.

I and/or the grader for the course do sometimes make mistakes. If you find a mistake, please see me as quickly as possible - within 1 week - after an assignment is returned; otherwise, that assignment score will be considered final. I highly recommend that you check out the FAQ page on Canvas.

Module Assessments (20% of Total Grade)

Assessments at the end of each module are used to evaluate learning and advanced analysis/application to the module content. You should complete all readings, videos, quizzes, and learning activities before completing the module assessment. **THE MODULE ASSESSMENT CAN ONLY BE TAKEN ONCE.**

- Be sure to review what you missed from the quizzes, learning activities, and cooking labs before you take the module assessment.
- Will be able to use resources (lecture notes, book, etc.) to assist you with the module assessment.

Do not brain dump after each module. The material builds on itself and gets used over and over again.

CAN ONLY BE TAKEN ONCE!

Exams - 2 (30% of Total Grade)

Exams will test information covered during lectures, assigned reading, quizzes, learning activities, at-home cooking projects, and assignments. There will be 2 exams in this course. The exams will be available over a window of time, BUT they must be completed in one sitting over one hour. You cannot pause the exam to retake it at a later time.

• You can use textbook, notes, calculator, and periodic table to assist you on the exam

<u>Dinner Party Final Project (10% of Total Grade)</u>

This final project will use your knowledge of culinary chemistry to create a plan for a theoretical dinner party. This will include the planning of a theme, menu, and collection of recipes with a group of your fellow classmates. If you have ever watched Top Chef and they do the Restaurant Wars for the challenge, this project will be along those lines. If you have not watched an episode where contestants do Restaurant Wars on Top Chef you should.

- Will work in groups of 4.
- You will have to get your Dinner Party Menu approved
- Will record a Dinner Party Group Video and submit it on Canvas
- This project is designed to utilize and apply what you have learned in the course.

I

• Have fun with this project. You get to plan a party!

Grades will tentatively be assigned on a A: 100-90, B:89-80, C:79-70, D: 69-60 scale, but may be adjusted based upon my evaluation of the overall class performance. Attendance, class participation, and initiative will be considered for borderline grades. Grades will be posted on Canvas and weighted as follows:

Quizzes/Learning Activities	20%	
Cooking Labs	20%	6
Module Assessments	20%	(A+)
Exams (2)	30%	\mathbf{U}
Group Project	10%	
Total	100%*	_

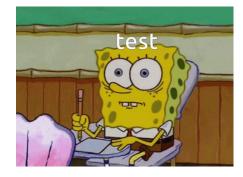

Email Policy (jeromelewis@ uttyler.edu)

Contrary to popular thought, instructors do have lives outside. Saying that: I will try to respond to email regularly throughout normal business hours (8:30 am -5:30 pm). After hours and weekends, I will respond as my life activities allow. Please do not expect responses to emails sent after 5:30 pm until the next day.

Student and Academic Conduct

Chemists come from all walks of life (varying ethnicities, different religious beliefs, gender, etc.) and it is important as scientists to be able to work professionally with others in different environments. Under no circumstances will any derogatory remarks or actions be permitted.

For this course students are encouraged to work together to study and prepare for exams. However, during exams students are to work alone. Cheating will not be tolerated and if discovered appropriate measures will be taken to address the issue.

Course Topics

- Module 1 Intro and Basic Chemistry
- Module 2 Flavor Biology
- Module 3 Nutrition
- Module 4 Milk
- Module 5 Cheese, Yogurt, Sour Cream
- Module 6 Non-enzymatic Browning
- Exam 1 July 21st
- Module 7 Fruits and Vegetables
- Module 8 Meat and Fish
- Module 9 Eggs, Custard, and Foams
- Module 10 Bread
- Module 11 Seasonings
- Module 12 Beer and Wine
- Exam 2 August 9th
- Group Project (Dinner Party Final Project) -August 7th

Student Resources

- Enrollment Services Center is where you add/change majors, add or drop classes or get financial aid help. (They are very busy during the first couple of weeks of the semester and around the "drop date" so please cut them some slack during those times.)
- <u>Student Counseling Center</u>
 - Dealing with stress/anxiety, improving studying skills, time management, etc. (all confidential)
- <u>UT Tyler Student Health and Wellness</u>
 - Substance abuse, household violence, good eating habits, etc.
- <u>Academic Success</u>
 - Student Learning Communities (SLC), PASS Tutoring Center, and Upswing 24/7 online tutoring
- <u>Mathematics Learning Center</u> (RBN 4021)
 - Open access computer lab with tutors on duty to assist students enrolled in early-career courses
- T<u>he Writing Center</u>
 - They will help you learn how to right rite-write gooder better.
- <u>Student Life</u>
 - Clubs, Greek System, recreational sports, service opportunities, etc.
- <u>Patriot Engage</u>
 - \circ ~ See what activities are being held and coming up ~ on campus
